Rational (DEPRECATED)

?? **This module is deprecated.** Use `@rational` in module `moonbitlang/x` instead. Note that you need to rename `Rational` to `Rational64`.

The `Rational` type represents a rational number, which is a number that can be expressed as a fraction a/b where a and b are integers and b is not zero.

All tests and examples have been removed. Please refer to the new `moonbitlang/x` module for updated documentation and examples.
